Home Page Differences:

Firefox is almost identical to Chrome. There is a very slight difference in the zoom of the page, with Firefox being roughly 5-10px larger, due to how the scroll bar works on Firefox (it overlays, instead of pushes it to the left). Colors, fonts, and font sizes are all a near perfect match. The background image is also a perfect match for Chrome. There is slight spacing difference in the nav link positions, but all other layout and spacing looks identical.

Edge has a marked difference from Chrome. The most prominent change is that the h2 in the Amenities section has been pushed to two lines instead of one. This also adds a significantly larger space between the intro paragraph and the Amenities section. This causes the edge page to be significantly longer. Font sizes are very close, and all font styles and colors appear to be the same as chrome. The background pattern in Edge is slightly thicker, and the darker color appears to have more of a brownish tinge to it, rather than the greyish blue that both Firefox and Chrome have.

Contact Page Differences:

Once again Firefox is a near perfect match to Chrome, with the hero image is a tiny bit larger, the nav links slightly moved, and the position of the main area slightly shifted to the right due to the scroll bar. Colors, fonts, and form fields all look and behave exactly the same as Chrome.

Edge is much closer to Chrome on this page, font sizes are all the same, and the form looks and behaves the same as Chrome. There is a slight difference in position of the nav links and main. Again the background design color is slightly off.
